

The XM Satelllite Weather and Traffic channels has kept me out of several dangerous and potential harmful traffic situations in the past several months. This service is constant and repeats for the most frequent and up to date information to keep my family safe. This service is unmached in the Philadelphia-New York-Boston area and should be expanded to include mid-city routes like I-78 and I-80, not discontinued. This also is a potential savings on the conservation issue as well. I avoid time, and therfore money in gas by not getting stuck in lengthy traffic jams, thanks to the information brought to me by the XM Satelllite Weather and Traffic channels.
